INTRODUCTION

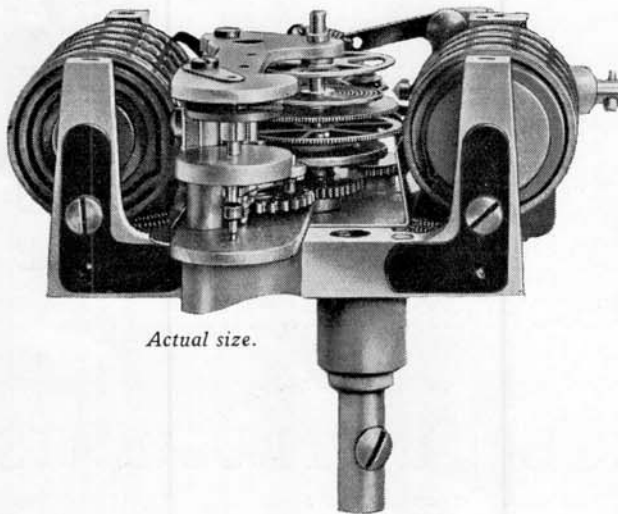

THE Jaeger Speedometer is British made throughout and is incomparably the finest speedometer obtainable. It is manufactured in a Works which was specially built to make Escapements and other Clock parts where scientific accuracy is required. In these Works, manufacturing limits of '0005 in. are habitual.

The design and construction of the Jaeger Speedometer is on the lines of a watch; in fact, it incorporates an escapement. As the result of this design, no matter how severe the vibration from bad roads, the hand remains absolutely steady and records with unfailing accuracy. This Chronometric principle of construction demands a considerably higher precision of workmanship than that ordinarily associated with such instruments.

In the racing world most famous drivers pin their faith to the Jaeger racing instruments on their cars.

It is of interest to note that the following British manufacturers of high grade motor-cars standardise Jaeger instruments on their productions:—

Citroen.
Crossley.
Humber.
Lea-Francis.
M.G.
Riley.
Rover.
S.S.
Singer.
Standard.
Sunbeam.
Talbot.
Triumph.
Etc., Etc.

Actual size.

The majority of Continental chassis manufacturers also fit Jaeger instruments.

GUARANTEE AND TERMS OF BUSINESS

All Jaeger instruments are guaranteed against defects in material or workmanship for a period of six months from date of delivery of vehicle. This guarantee is conditional upon the instrument not having been opened or interfered with, and provided the defect is not caused by ordinary wear and tear, negligence or accident.

Should your instrument not be functioning correctly, please return it carriage paid (complete with cable in the case of speedometer or similar instrument), when expert attention will be given without delay.

Consequential damages of any kind are not included in our guarantee.

CONDITIONS OF SALE

All Jaeger instruments are sold on the distinct understanding that they will not be listed, offered or sold by Factor or Dealer at less than our fixed wholesale or retail prices, and no discounts or allowances are to be made off such prices. All our goods are sold or offered for sale strictly upon the condition that same in turn will not be sold or offered for sale by auction whether separately or as component parts. Infringement of the above conditions implies immediate discontinuance of supplies.

Goods are only supplied by us on condition that they are not exhibited by any person, Firm or Company at any Exhibition or Show held in the United Kingdom, other than those held or approved of by the Society of Motor Manufacturers and Traders, Ltd. Any breach of these conditions will render the purchaser liable to indemnify us in respect of our liability under the Society's bonds, to pay the Society such damages as the Committee or Council of the Society may award.

Remittances should accompany all orders unless a current account is opened.

Orders by telegram can only be executed when customers have a current account or are known to the firm.

When ordering, please quote Type No. and Page No. of the article required, name of article, finish and size, in order to avoid any possibility of error.

Prices are liable to alteration at any time without notice.

Carriage and postal charges are charged to our customers.

MOTOR CYCLE SPEEDOMETER

MODEL "FM"

Actual size.

THIS Speedometer works on exactly the same principles as the other types of Jaeger Speedometers, and can be relied upon to withstand the most severe vibration. The hand remains absolutely steady at all speeds and the instrument records with unfailing accuracy. It is absolutely waterproof, a most important point on account of the exposed position when fitted to motor cycles.

The Jaeger Clip, for fixing the instrument to the handlebar, enables the instruments to be readily fixed to any diameter and type of handlebar or top tube.

PRICES :

Trip type complete with front wheel drive	£2 10 0
Non-trip type complete with front wheel drive	£2 5 0
Extra for back wheel drive	5 0
Trip Type (Head and Flex only)	£2 5 0

ELECTRIC PETROL GAUGE

52 mm. diameter. This is an entirely new design of Petrol Gauge, registering in gallons the exact contents of the tank. Can be supplied with or without illuminating windows. One feature of this instrument is that there is nothing to be done in the way of using a pump or handling in any way, being entirely independent of the driver. As long as there is petrol in the tank, the instrument registers the amount without any operation.

The reading is obtained by means of a float and lever in the tank, which is connected electrically to the dial fitted to the dashboard.

Price on application.

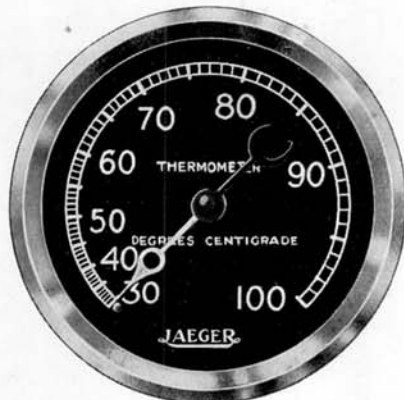

OIL AND PETROL LEVEL GAUGE

This gauge has been developed with a view to meeting the demand for a gauge reading direct on the instrument board and registering, as required, both the level of the Petrol in the Tank and record of the oil in the Sump. The principle of operation is similar to the Electric Petrol Gauge.

Price on application.

It will be appreciated that due to the construction of the Float arrangement and the need for special calibrations, these two types of Petrol Gauges are produced for the requirements of Car Manufacturers only.

DASHBOARD RADIATOR THERMOMETER

This instrument, which is similar to that used on all aircraft, gives the temperature of the water in the radiator, in the most favourable position, i.e., on the dashboard. The instrument is of extreme simplicity of construction, is very easily fitted, and is supplied complete with tubing suitable for any make of car.

COMBINED INTERIOR MIRROR AND 8-DAY HANDLESS CLOCK

Half size

THIS is an entirely new and attractive design, which combines an interior mirror of ample dimensions with an 8-day clock movement of our standard high quality, but designed in such a way as to dispense with the need of the dial lay-out and the hands. The illustration shows the method of giving the time in figures of ample size, which can be read at a glance by the occupants of a car, including those in the rear passengers' seat. In spite of the size given to these figures, it will be found that they do not by any means interfere with the use of the mirror. The eyes of the driver absorb the figures into the general view, when he is using the mirror as such. There are two sizes, the dimensions of which are as follows :

- 1.—7 × 3 $\frac{1}{4}$ in.
- 2.—6 × 3 $\frac{1}{4}$ in.

MODEL "F" MILEAGE RECORDER

THIS instrument may be fitted on the dashboard in the same method as a Speedometer, or, if preferred, it can be fitted on the side of the chassis, as close as possible to the gear box drive. The mileage may then be used privately by the Contractor, for reading various journeys and making a charge according to the mileage shown.

By means of a two-way gear box, the instrument can also be used in conjunction with the Speedometer only (shown on page 26). This would mean that speed would be shown on the dashboard in front of the driver, and the mileage would be shown on the side of the chassis.

The total records 100,000 miles, and the trip 1,000 miles.

The trip can be easily re-set to zero by means of the button, which can, by special arrangement, be fitted with a Padlock for a small extra cost.

	PRICE :		
Head complete with cable, Trip Type	..	£3 5 0
