- 6. Ball Bearing on which

## Clutch plate bearing 1920's AJS

**Bearing no. R12**  
**1 1/4" o/s dia**  
**23/32" i/s dia**  
**5/16" thick**

This presses in the plate and is a sliding fit on the shaft. To move when plate separates when clutch is activated. Some shafts have a smaller dia, so the bearing will need a sleeve to reduce i/s dia. Correct bearing not available now.

**PLATE IS FROM A 1928 K9**
